```
This cDNA encodes a human T-box transcription factor protein, MTbx. The polypeptide can be administered therapeutically, especially by expressing encoding polynucleotides. to treat disorders characterized by aberrant polypeptide expression or activity, e.g. immune system diseases (e.g. HIV, leukemia, etc.), chronic inflammatory diseases (e.g. asthma, HIV, leukemia, etc.), developmental disorders, cardiovascular disorders, or other disorders arising from improper transcriptional regulation. They are especially useful to treat conditions characterized by loss of tissue integrity relating to disease and/or injury e.g. HIV, hibernating myocardium during myocardial ischemia etc. It can be used to diagnose diseases related to polypeptide expression or activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    produce non-human transgenic animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polynucleotide may also be used to produce non-human transgenic animal and to produce probes useful to detect related sequences, or for gene mapping. The Mtbx gene was mapped to chromsome 3p23-p24.

```
The present sequence encodes a murine neutral endopeptidase metallopeptidase-like enzyme, designated NL-1. The specification also describes NL-2 and NL-3. The NL enzymes are used to test for specific inhibitors. The N-terminal region of the enzymes can be used to promote production and secretion of foreign proteins and active biopeptides, using chimmeric constructs containing the foreign protein downstream from and in phase with the N-terminal region. The NL enzymes are have been localised to the brain, and may be useful in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA ligase IV; LIG4; cellular DNA repair; modulation; diagnosis; XRCC4; Ku-associated DNA repair pathway; cancer; retroviral infection;
                                                                                                                                                                                                                                                                                                   treatment of neurological diseases such as Alzheimer's disease, pain, and psychiatric disorders. NL enzymes have also been localised to the testis and ovaries, and may be used to control fertility. They have also been localised to bones, and may be used to treat bone diseases, and abnormal phosphate metabolisms related to improper peptide processing by the NL-3 enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
Novel neutral endopeptidase-like metallopeptidase polypeptides and polynucleotides, used to screen for related sequences and enzyme inhibitors, used for the treatment of NL-3 related bone disorders

A method has been developed of assaying for a compound able to modulate the interaction or binding between XRCC4 and any of DNA ligase IV and/or DNA-PRCs/Ku (DPK). The method comprises: (a) bringing into contact: (i) a substance including XRCC4 (or a fragment, derivative, variant or analogue able to bind DNA ligase IV or DPK); (ii) a substance including DNA ligase IV or DFK); (ii) a substance including bund xigore and/or (iii) DPK (or a fragment, derivative, variant or analogue able to bind XRCC4), and a test compound under conditions where, if the test compound is not an inhibitor of interaction or binding between the substances interact or bind; and (b) determining interaction or binding between the substances. Compounds which modulate the interaction between the substances. Compounds which modulate cellular DNA repair activity, e.g. in the treatment of proliferative disorders, cancers and tumours, disorders involving retroviruses such as AIDS, human adult T-cell leukaemia/lymphoma, Type I diabetes and multiple sclerosis, and also in radiotherapy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       chemotherapy. They can also be used in the potentiation of gene targeting and gene therapy. They can also be used for the modulation of

The present invention describes colon tumour associated proteins.(I) and the polynucleotides (II) that encode them. (I) have cytostatic activity. (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TCAP) expression, such as Colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of TCAPs by expressing inactive proteins or to supplement the patients own production of them. Additionally, (II) may be used to produce the TCAP proteins, by inserting the nucleic acids into a host complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and the presence of similar nucleic acids in samples, and immunosorbant assay (ELISA)). AAI28460 to AAI29512 herefore which patients may be in need of restorative therapy. (I) may lso be used as antigens in the production of antibodies against TCAPS Anti-(I) antibodies and antagonists may also be used to down regulate ICAP expression and activity. The anti-(I) antibodies may also be used as diagnostic agents for detecting the presence of TCAPs in samples and AAM24494 to AAM24523 represent nucleotide and amino acid sequences given in the exemplification of the present invention. in assays to identify modulators of TCAP expression and activity Colon tumor associated proteins and nucleic acids useful for the prevention, diagnosis and treatment of colonic cancer -Colon tumour related determined cDNA sequence for clone CT2-75.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -AUG-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1-AUG-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          - AUG-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -AUG-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4-AUG-
           The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemlytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative (d) wound healing; (e) neurological diseases such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       chicken; sheep; immunosuppressive; antiarthritic; vasotropic; antiproliferative; cytostatic; cardiant; neuroprotective; cerebroprotective; noctropic; antibacterial; virucide; fungicide; cancer; ophthalmological; vulnerary; gene therapy; autoimmune disease; neoplasm; hyperproliferative disorder; breast; liver; cardiovascular disorder; ds;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

the lung antigen polypeptides of the invention. Lung antigen polypeptides and their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a lung antigen polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis,
                                                                                                                                                                                                                                                                                                                                                             Sequences AAS29931-AAS30164 represent genomic DNA molecules, which encode
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rat sequence differentially expressed in response to a hepatotoxin #1041.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as premature labour and infertility, gastrointestinal disorders such as premature labour and infertility, gastrointestinal disorders such as crom's disease, renal disorders such as glomerulonephritis and respiratory disorders, such as astroma and pleuristy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn to maintain organs before transplantation; to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        preservative to increase or decrease storage capabilities.
Note: The sequence data for this patent did not form part of the printer specification, but was obtained in electronic format directly from WIPO at ftp wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              hyperproliferative disorders such as neoplasms of the breast or liver,

The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the global changes in gene expression in tissues or cells exposed to the toxic and comparing these to gene expression in unexposed tissues or cells. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the hepatotoxicity of a compound, comprising detecting the level of expression in a tissue or cell sample exposed to the compound of two or ceptession in a tissue or cell sample exposed to the compound of two or more genes is indicative of at least one toxic effect or progression of the genes is indicative of at least one toxic effect or progression of the genes is indicative of at least one toxic capturession. The method can also be used to identify an agent which modulates the toxic response and predict cellular pathways that a compound modulates to a coull. The method sufflises a set of at least two probes (on a solid support in kit form), where each of the probes comprises on a gene listed in the specification, a computer specifically hybridises to a gene listed in the specification, a capturer comprising at least two genes listed in the specification.

System comprising at least two genes listed in the specification of a set of genes comprising at least two genes listed in the specification. The method is useful for elucidating global changes in gene expression and for identifying toxicity markers in classic contaction or identification of the physiological state of tissue or cell exposed to a known toxin. The genes and gene expression information may be used as diagnostic markers for the prediction or identification or ident

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed sequence tag (EST) or cDNA derived from a genewhich is differentially expressed in response to a hepatotoxic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     has been exposed to a compound or agent. ARK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased carmple, they may be used to treat disorders associated with decreased that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) cupplement the patients own production of (I). Additionally, (I) proteins and polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54912 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; foetal liver; gene expression; single exon nucleic acid probe; ss.

present sequence is one such probe. The probes may be used for predicting, mesuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system congenital heart disease. Hypertension, cardiac arrhythmias and Note: The sequence data for this patent did not form part of the printed appecification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                         ŏ
                                                                                                                                                                                                                       measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.
                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

RESULT 15

g

The

The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart.

Claim 4; SEQ ID No 17267; 530pp; English.

Single exon nucleic acid probes for analyzing gene expression in human hearts

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                      NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 56 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

AA323074/c	
	AA323074 311 bp mRNA linear EST 20-APR-1997
DEFINITION	Cerebellum II Homo sapiens cDNA 5
ACCESSION	AA323074
	AA323074.1 GI:1975399
	EST.
	human.
ORGANISM	Homo sapiens
	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
	Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

The library was constructed in the vector pT773-Pac as described in Bonaldo, M.E., Lennon, G. and Soares, M.B. 'Normalization and subtraction: two approaches to facilitate gene discovery', Genome Research (5791-806, 1996. The first strand synthesis used a NotI-dT18 primer; double stranded cDNAs were ligated to ECORI adapters, digested with NotI, and directionally cloned into the NotI and ECORI-digested pT773-Pac vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      constructed by N. /note="Vector: pT773-Pac; Site_1: ECORI; Site_2: NotI; PolyA-selected mRNA was prepared from unfertilized Xenopus laevis eggs. The library was constructed in the vector pT773-Pac as described in Bonaldo, M.F. Lennon, G. and Soares, M.B. Yormalization and subtraction: two approaches to facilitate gene discovery', Genome Research 6:791-806, 1996. The first strand synthesis used a NotI-dT18 primer; double stranded cDNAs were ligated to EcoRI adapters, digested with NotI, and directionally cloned into the NotI and EcoRI-digested pT773-Pac vector. The library contained approximately 7.2 x 10^5 recombinants, with average insert sizes of 1-1.5 kb."

on rice as their primary source of carbohydrate.

Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 431 Mbp (Arumuganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, Nipponbare variety using EcoRi as the cloning enzyme. The library contains 55.296 clones with an average insert size of 121 kb providing approximatley 15 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Three high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening and can be requested from the Clemson University BAC/EST Resource Center (www.genome.clemson.edu)."

Library constructed by M. Kirschner (Harvard Medical School). DNA
Sequencing by: Washington University Genome Sequencing Center
Clone distribution: Xenopus clones from this library are available
through the I.M.A.G.E. Consortium/LLNL at: infoetmage.llnl.gov
Seq primer: -40UP from Glaco
High quality sequence stop: 460.
Location/Qualifiers
BG414006 475 bp mRNA linear EST 13-MAR-2001 de76g12.x1 Kirschner embryo St10 14 Xenopus laevis cDNA clone IMAGE:3517655 3', mRNA sequence.
